Syeda Kiran Bukahri

Frontend Devloper at Remote

As a passionate Frontend Developer, I specialize in building beautiful, responsive user interfaces using React, JavaScript, and Tailwind CSS. I enjoy solving real-world problems through clean code and intuitive design. With hands-on project experience and a strong foundation in modern frontend practices, I aim to create web experiences that are fast, accessible, and user-focused.

Skills & Strengths

- React.js Development
- Version Control with Git & GitHub
- Time Management
- Responsive UI/UX Design
- Communication & Collaboration
- JavaScript & TypeScript
- Problem-Solving

Experience - Less than 1 Year

Frontend Devloper
REMOTE - Lahore, Pakistan | Dec 2023 - Present

As a Frontend Developer, I specialize in turning ideas and designs into interactive, responsive, and high-performance websites and web applications. My work focuses on creating clean and reusable code using modern technologies like **React**, **JavaScript/TypeScript**, **Tailwind CSS**, and **Vite**.

I build intuitive user interfaces with a strong focus on **usability**, **accessibility**, and **performance optimization**. From landing pages and portfolio sections to complex forms with **API integration** and **real-time user feedback**, I aim to deliver seamless digital experiences across all devices.

I'm comfortable working with **React Router**, **framer-motion** for animations, **dark/light themes**, and services like **Web3Forms** and **Calendly** to enhance user interaction. I prioritize maintainable code, clear component structure, and ensure pixel-perfect implementation from Figma or design specs.

Whether it's collaborating in a team or working independently, I'm always focused on delivering frontend solutions that are not just visually appealing but technically sound.

Tools: React + vite +Tilwindcss UI libraries
I built a modern, responsive portfolio website to showcase my skills, projects, and contact information as a frontend developer. The site is developed using **React**, **Tailwind CSS**, and **Vite**, with smooth scroll navigation and light/dark theme support. It includes animated sections like **hero**, **projects**, and a **contact form** powered by **Web3Forms** for real-time email submissions. I also integrated **Calendly** for easy meeting scheduling, and added form validation, alerts, and reset functionality to ensure a smooth user experience. The entire site is designed to reflect clean code, strong UI/UX principles, and developer professionalism.
